SENTINEL — Client Pilot Runbook

TrinTech Digital Defense · One host · 14-day pilot · Authorized defensive monitoring only

Continuous host monitoring and early warning — canaries, shell detection, file integrity, SSH abuse blocking, clear alerts and reports — without a full SOC.

Pilot — 1 host	**Pilot + readout**	**Monthly (after)**
USD 450 / TTD 3,000	USD 650 / TTD 4,400	USD 200–350 / host

INSTALL & GO-LIVE (day 0)

1. Written authorization — host IP/scope, monitoring only, signed ROE
2. Install — `git clone …/Sentinel.git && cd Sentinel && python3 setup.py`
3. Pilot check — `python3 sentinel.py pilot`
4. Baselines — `python3 sentinel.py integrity`
5. Canaries — `python3 sentinel.py deception`
6. Always-on — `python3 sentinel.py service-install` (or menu 1 continuous)
7. Field soak — `python3 sentinel.py field-soak --confirm`
8. Alerts (pick one) — WhatsApp in config · or `siem splunk-configure --url … --token …`
9. Handover — dashboard URL + token · critical ACK process · save pilot_report.json

DURING THE 14-DAY PILOT

- Leave continuous protection running (service or supervised hunt).
- Client escalates only on **CRITICAL** (canary touch, reverse shell, integrity breach).
- Operator triage then ACK: `python3 sentinel.py critical status` → `critical ack <id>`
- Optional weekly check: `python3 sentinel.py doctor` · `ops` · `field-soak`

END OF PILOT (day 14)

- Re-run `python3 sentinel.py pilot` and `field-soak`
- Deliver PDF report + 30-minute management readout
- If value is clear → convert to monthly monitoring (price above)

IN SCOPE vs OUT OF SCOPE

In pilot	1 Linux host · FIM/SUID/persistence · canaries · continuous hunt · 1 alert channel · pilot + field-soak reports · 1 install + 1 readout
Not included	Multi-site fleet · 24/7 SOC · custom SIEM build · Windows estate · offensive testing · guaranteed prevention

QUICK OBJECTIONS

Need a full SOC?	This is early warning on the server you care about — not a SOC replacement.
Lock us out?	Firewall stays dry-run unless confirmed; lockout guard protects operator SSH.
Can we review it?	Yes — plain Python source; authorized defensive use only.
